

Gulf of Mexico Harmful Algal Bloom Bulletin

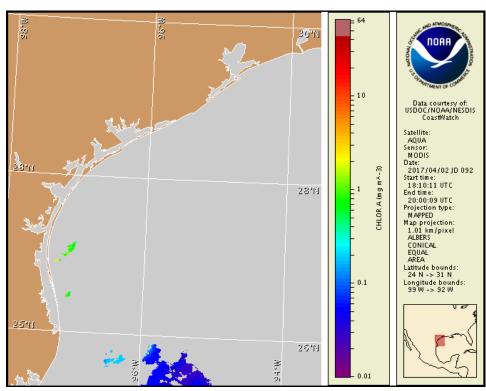

Region: Texas Monday, 03 April 2017

NOAA National Ocean Service

NOAA Satellite and Information Service

NOAA National Weather Service

Last bulletin: Monday, March 27, 2017

Satellite chlorophyll image with possible *K. brevis* HAB areas shown by red polygon(s), when applicable. Points represent cell concentration sampling data from March 24 to 31: red (high), orange (medium), yellow (low b), brown (low a), blue (very low b), purple (very low a), pink (present), and green (not present). Cell count data are provided by Texas Parks and Wildlife Department. For a list of sample providers and a key to the cell concentration categories, please see the HAB-OFS bulletin guide:

http://tidesandcurrents.noaa.gov/hab/hab_publication/habfs_bulletin_guide.pdf

Detailed sample information can be obtained through the Texas Parks and Wildlife Department at: http://www.tpwd.state.tx.us./landwater/water/environconcerns/hab/redtide/status.phtml

Conditions Report

Karenia brevis (commonly known as Texas red tide) ranges from not present to background concentrations along the coast of Texas. No respiratory irritation is expected Monday, April 3 through Monday, April 10.

Check https://tidesandcurrents.noaa.gov/hab/beach_conditions.html for recent, local observations.

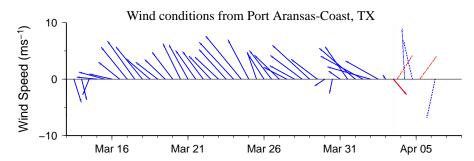

Analysis

Sampling from the Texas A&M University's Imaging FlowCytobot (IFCB), located on the Port Aransas ship channel, indicates that *Karenia brevis* concentrations range between 'not present' and 'background' (TAMU; 3/27-4/3). For information on area shellfish restrictions, contact the Texas Department of State Health Services.

Recent MODIS Aqua ensemble imagery (4/2; shown left) is completely obscured by clouds alongshore and offshore the Texas coast, preventing analysis.

Forecast models based on predicted near-surface currents indicate a potential maximum transport of 15 km south from the Port Aransas region from April 2 to April 6.

Urízar, Davis

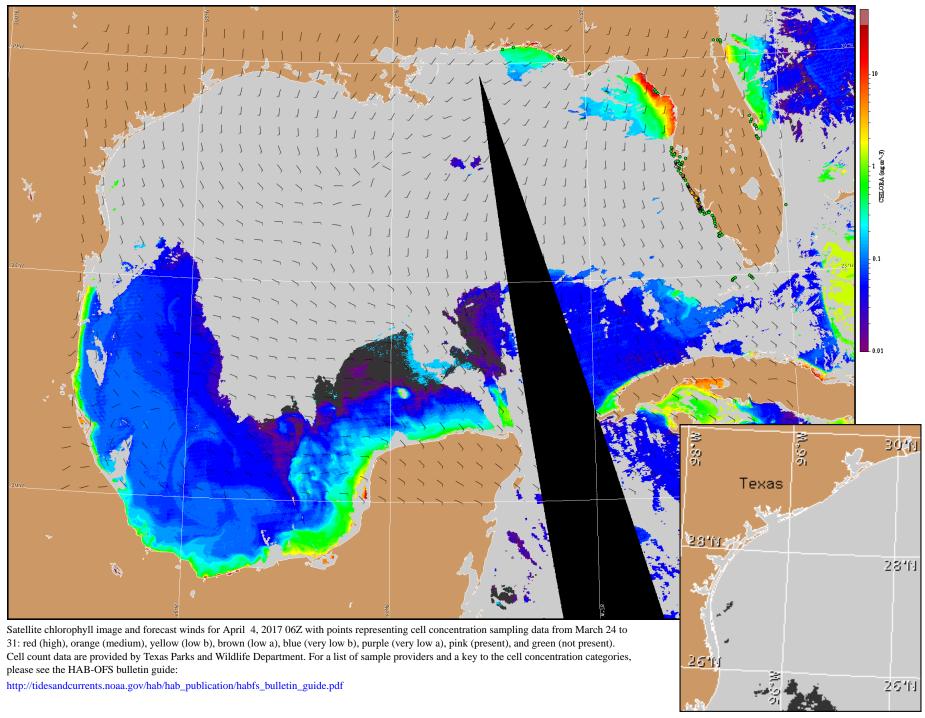

Wind speed and direction are averaged over 12 hours from buoy measurements. Length of line indicates speed; angle indicates direction. Red indicates that the wind direction favors upwelling near the coast. Values to the left of the dotted vertical line are measured values; values to the right are forecasts. Wind observation and forecast data provided by NOAA's National Weather Service (NWS).

Wind Analysis

Port Aransas to Matagorda Ship Channel: Northwest winds (10-15 kn, 5-8 m/s) today with southwest winds early Monday afternoon. South winds (10-15 kn) Monday night through Tuesday night. North winds (15-25 kn, 8-13 m/s) Wednesday. Northeast winds (10-15 kn) Thursday with east winds (5-10 kn, 3-5 m/s) Thursday afternoon. Southeast winds (5-15 kn, 3-8 m/s) Thursday night through Friday.
